

MediGate's are custom-designed

These units are inflatable entrance seals manufactured to offer a simple, cost-effective way to protect patients, hospital personnel and sensitive medical equipment from the elements and other potential hazards while in transit between the scanner vehicle and hospital access point.

These units are currently in use at more than 400 hospitals and medical centers throughout the country, MediGate perimeter seals inflate in just minutes to eliminate exposure to wind, rain, snow and temperature extremes, and are guaranteed to fit all vehicles participating in your mobile diagnostic equipment program.

MediGate Offers All the Quality Features of Industrial-Grade Dock Seals with a Custom-Tailored Appreciation for Appearances.

MediGate is constructed of a long-lasting, puncture-resistant neoprene or hypalon-coated nylon and is available with a choice of three uniquely functional suspension systems: a simple elastic rope system, a smooth-rolling rail system, and a fully retractable slide-frame system. We represent this leading manufacturer of inflatable dock seals for the materials handling industry, we custom engineer and fabricate each seal to conform to your specifications-as well as the architecture of your building so MediGate will serve practically and unobtrusively for years to come.

Because these units are so custom, we cannot provide a standard drawing or specifications. Please contact us personally to ensure proper application.
